

NAVIGUIDE + Blue Intelligence

Nebius x NVIDIA Global AI Hackathon — Best Apps and Agents

Production AI agents for a real circumnavigation. Unknown fields stay empty — we never invent a fact a sailor cannot verify.

What it is

NAVIGUIDE (naviguide.fr) — multi-agent routing assistant: Copernicus wind/wave/current, land-avoiding routing, LangGraph skipper briefing (route to risk to briefing).

Blue Intelligence (blueintelligence.online) — geospatial platform that turns maritime web sources into a map: projects, marinas, harbour masters, ports of entry, marine protected areas.

Hackathon slice (what to judge)

Runtime LLM calls on **Nebius Token Factory** with **NVIDIA Nemotron**: Nano for high-volume extract/classify; Super/Ultra for multi-step briefings. Pre-existing map/UI declared. Fail-closed JSON.

Links

Demo: <https://www.naviguide.fr> and <https://blueintelligence.online>

Code: public GitHub repo on the Devpost submission

Track: Best Apps and Agents · Country: France

How to test (5 minutes)

1. Open [naviguide.fr](https://www.naviguide.fr) — world route, click a waypoint, read the briefing panel.
2. Open blueintelligence.online — switch Marinas / Ports d'entree / AMP.
3. README in the GitHub repo: Token Factory + Nemotron routing, failure modes, how to run.

Stack

Python · FastAPI · React · MongoDB · LangGraph · MapLibre · NVIDIA Nemotron · Nebius Token Factory · nginx / Cloudflare

Team: Association Berry-Mappemonde (Devpost contact on the submission form).
